

Ahmed Mahran

Full-Stack Software Engineer

Location: Alexandria, Egypt (Available to Relocate)

Mobile: [+201141125185](tel:+201141125185)

Gmail: Ahmed.mahran824@gmail.com

LinkedIn: www.linkedin.com/in/ahmed-mahran-528187264

GitHub: github.com/mahran80

SUMMARY

Full-Stack Software Engineer specializing in enterprise-level .NET and Python (Django) frameworks. Experienced in architecting robust systems using the ABP Framework, Clean Architecture, and Entity Framework Core. Adept at developing responsive interfaces and mobile applications, with a strong emphasis on practical, secure, and scalable implementations. Actively utilizes AI-driven development environments for workflow efficiency, alongside a unique background in Linux Administration and Quantum Computing (Qiskit).

EDUCATION

Alexandria University, Faculty of Science | Graduation: June 2025

Bachelor of Science in Computer Science • GPA: 3.4/4.0

SKILLS & TOOLS

Back-End & Architecture: C#, .NET, ASP.NET Core MVC, ABP Framework, Entity Framework Core, Clean & N-Tier Architecture, DDD, SOLID, Python, Django, DRF, SignalR, OpenIddict, Mapperly, Java

Front-End & Mobile: HTML5, CSS3, JavaScript, Dart, Flutter, Bootstrap

Databases: SQL Server, PostgreSQL, MySQL

Tools & DevOps: Docker, Linux Administration, Redis, Celery, RabbitMQ, Git/GitHub

Specialized: Quantum Computing (Qiskit), Networking, OS

Personal Skills: Problem Solving, Strategic Planning, Team Collaboration, Technical Research, Time Management

EXPERIENCE

Backend Software Engineer | Bless-Tech | Feb 2026 – June 2026

Project: Tabebify (Healthcare Management System)

Technologies: .NET, ABP Framework, Entity Framework Core, SQL Server, SignalR, OpenIddict (OAuth 2.0), Mapperly

- Architected the backend using Clean Architecture and the ABP Framework, applying Domain-Driven Design (DDD) principles to separate complex business logic across 24 distinct domain entities.
- Integrated SignalR to establish real-time WebSocket connections, enabling live geospatial tracking of healthcare providers and dynamic updates for an intricate appointment state machine.
- Implemented secure OAuth 2.0 and OpenID Connect authentication flows utilizing OpenIddict, alongside a strict Role-Based Access Control (RBAC) system.
- Engineered a localized matching algorithm capable of dynamically querying available healthcare providers within a specific radius using bounding box calculations and precise coordinate mapping.

PROJECTS

Center Management System (Educational ERP) | May 2026

Technologies: ASP.NET Core MVC, Entity Framework Core, SQL Server, ASP.NET Core Identity, HTML/CSS/JS

- Structured the monolithic application across distinct Domain, Application, Infrastructure, and Web layers to enforce N-Tier architecture and separation of concerns.
- Engineered multi-context transactional workflows (orchestrating ASP.NET Identity alongside EF Core) with manual rollback compensation to guarantee data integrity during complex operations.
- Leveraged EF Core advanced features, including Global Query Filters for soft-deletion mechanisms and overriding SaveChanges to automate centralized audit timestamping.

- Developed an asynchronous Audit Logging service to safely capture system-wide mutations without blocking business transactions, alongside a secure Role-Based Access Control (RBAC) system.
- Designed clean UI pipelines utilizing ViewModels and DTOs to securely map data between Razor Views and the Application layer, handling dynamic lookups and file I/O operations.

Aya Food Ecommerce Platform (Freelance) | May 2025

Technologies: *Django, PostgreSQL, HTML/CSS, Bootstrap, Celery, Redis, RabbitMQ*

- Built a multi-vendor marketplace featuring seller dashboards, product CRUD, and category filtering.
- Implemented an asynchronous task system using Celery and Redis for automated email confirmations and PDF invoice generation.
- Developed secure user authentication with email verification and session-based cart management.

Online Quiz Game (Graduation Project)

Technologies: *Django Rest Framework, WebSockets, Daphne, Redis*

- Created a real-time multiplayer quiz game with live question delivery using WebSockets.
- Implemented secure session management using cookie-based authentication and used Redis for high-performance caching.

Quantum Random Password Generator (Qworld)

Technologies: *Python, Qiskit, Tkinter*

- Developed a secure authentication system using Quantum Randomness (QRNG) via Qiskit for unpredictable password generation.
- Built a user-friendly GUI with Tkinter supporting full Sign-up and Login functionalities.

Hotel Booking System (Freelance) | Aug 2025

Technologies: *Django Rest Framework, JWT Authentication, HTML, CSS, JavaScript*

- Developed a comprehensive booking engine with real-time room availability and advanced filtering.
- Secured the system using JWT Authentication and implemented automated booking validation logic.

Library Management System (Self-Study) | Dec 2024

Technologies: *Django, HTML, CSS, JavaScript*

- Built a full-scale management system with CRUD operations and Role-Based Access Control (RBAC).
- Focused on backend logic efficiency and secure data management.

Flutter Traveling App (Self-Study) | June 2024

Technologies: *Flutter, Dart*

- Developed a cross-platform mobile app for travel planning, including trip management and location search.
- Applied Clean Code principles to ensure app performance and maintainability.

INTERNSHIPS

- **Full-Stack Web & Generative AI using .NET** | Information Technology Initiative (ITI) | Jan 2026 – June 2026 (*Hybrid*)
- **Software Development – FullStack .NET Web Developer** | Digital Egypt Pioneers Initiative (DEPI) | June 2025 – Dec 2025 (*Hybrid*)
- **FullStack Web Development using PHP (90 hrs)** | Information Technology Initiative (ITI) | August 2025 (*Remote*)
- **Linux Administration (60 hrs)** | Information Technology Initiative (ITI) | Jan 2025 – Feb 2025 (*Remote*)
- **Elements of Quantum Computing & Programming** | University of Latvia | Sept 2024 – Dec 2024 (*Remote*)
- **Quantum Computing & Programming (QBronze – Qiskit)** | QWorld | August 2024 (*Remote*)
